A

 <p>View products ></p>	<p>Abbkine Scientific</p> <p>Abbkine Scientific Co., Ltd. aim to provide innovative, high quality assay kits, recombinant proteins, antibodies and other research tools to accelerate life science fundamental research and drug discovery.</p> <p>Abbkine cancer specific monoclonal antibodies are specially designed for Immunohistochemistry (IHC) on human tumour cells. Their broad range of ELISA kits is validated on a large variety of species (including bovine, ovine, canine, porcine...).</p>
 <p>View products ></p>	<p>Abnova</p> <p>Abnova takes a genomic/proteomic approach for the development of antibodies in Life Sciences research.</p> <p>Their comprehensive offer of monoclonal and polyclonal antibodies together with recombinant proteins (to be used as controls for immuno-assays) and ELISA kits are available in Europe via Teubio, as well as the collection of Rabbit polyclonal MaxPab® antibodies generated from full-length proteins (instead of peptide antigens for immunization) to recognize both linear and conformational protein epitopes for classical applications (WB, IF, IHC, IP, FC).</p>
 <p>View products ></p>	<p>ABP Biosciences</p> <p>ABP Biosciences develops and manufactures life science reagents focusing on fluorescence-based detection. The company has developed several unique products, such as Andy Fluor dyes, iQuant™ DNA or RNA Assay Kits, Phospho-Tag™ Phosphoprotein Gel Stain, and ultra-sensitive ECL Western Blot Reagent, cell functional assays (Apoptosis, Viability, Proliferation), cell structure probes as well as transfection reagents.</p>

 View products >	<p>Adjuvatis</p> <p>Adjuvatis is a biotech company founded in 2013 from a research unit involving both French National Center for Scientific Research (CNRS) and bioMérieux company. Specialized in the manufacturing and formulation of a safe-by-design delivery system, Adjuvatis has developed two main technologies : i-Particles® which are high-quality nanoparticles used for encapsulation of Hydrophobic Molecules and Proteins loading on the surface, and i-LipoP® which is an efficient mRNA transfection reagent dedicated to hard-to-transfect cells. This i-LipoP® technology is also perfectly convenient for lab manipulations requiring time flexibility, thanks to a stability of 48h between formulation and transfection.</p>
 View products >	<p>AIM Biotech</p> <p>AIM Biotech provide Life Scientists with a modular microfluidic-based solutions (e.g. gas permeable chips, hydrogels...) to co-culture different cell types in discrete 3D and 2D compartments.</p> <p>AIM Chips enable the use of chemical gradients and flows (both interstitial & shear) to tune the culture microenvironment and thus obtain more biologically relevant experimental data.</p>
 View products >	<p>Anaspec</p> <p>Since 1993, AnaSpec, Inc. (a Eurogentec company) is specialized in the development of peptides, antibodies, assay kits for basic research, high-throughput screening, drug discovery and assay development. They provide a broad range of catalog and custom biochemicals and reagents together with custom peptide synthesis.</p>
 View products >	<p>Aoxre</p> <p>Aoxre LLC provide assay products for testing and measuring oxidative stress biomarkers as well as antioxidant, nitrosative, DNA damage and inflammatory Biomarkers.</p>
 View products >	<p>Arbor Assays</p> <p>Arbor Assays build robust immunoassay and enzyme activity kits to quantitate biomolecules in biological matrices. Recognizing the need for sensitivity, speed, convenience, quality, and service, Arbor Assays researches, develops, and manufactures the highest quality detection and immunoassay kits for clinically important biomolecules.</p>
 View products >	<p>Assay Biotech</p> <p>Assay Biotech offer ELISA kit and 5,000+ validated antibodies that span a wide range of cell signalling pathways. This unique collection of research primary antibodies features over 1,000 phospho-specific antibodies, isoform and modification-specific antibodies, antibodies against ion channels, transmembrane proteins, receptors, G-Protein Coupled Receptors (GPCR)... Each antibody is validated using a combination of Western blot (WB), direct enzyme-linked immunosorbent assay (ELISA), immunohistochemistry (IHC), immunocytochemistry (ICC), and immunofluorescence (IF).</p>

<p>Bayou Biolabs</p> View products >	<p>Bayou Biolabs</p> <p>Bayou Biolabs produce highly purified but affordable enzymes, DNA ladders and pUC & M13 DNA for use in molecular biology applications.</p>
---	---

 <p>View products ></p>	<p>baseclick</p> <p>baseclick, based in Germany, near Munich, has been an expert in the field of DNA/RNA modification for almost two decades, offering numerous modified nucleic acids and developed assays such as cell proliferation, PCR and FISH kits.</p> <p>The use of their modified NTP, dNTP, ddNTP, phosphoramidites, CAPs, etc. enables researchers to bind small molecules to oligonucleotides or larger DNA/RNA constructs at high rates.</p> <p>Biopharmaceutical companies, universities and other research institutes also turn to baseclick as a manufacturer of modified nucleic acids, especially for mRNA or cRNA, and as a consulting partner for targeting strategies. baseclick supports them in early research, diagnostics and preclinical drug development.</p>
 <p>View products ></p>	<p>BioAustralis Fine Chemicals</p> <p>BioAustralis provides high purity metabolites from microbes and plants as laboratory research tools. They specialise in the fermentation and isolation of rare metabolites from actinomycetes, bacteria, fungi and plants. Metabolites are produced in their own laboratories to guarantee reliable quality, supply and service</p>
 <p>View products ></p>	<p>Bioauxilium</p> <p>BioAuxilium provides ready-to-use detection kits based on immuno-assays & TR-FRET technology. These Thunder™ Cell Signalling Assays enable sensitive, simple and rapid measurement of low amounts of specific intracellular phosphorylated and total proteins (e.g. ERK1/2, AKT, insulin receptor, STAT3, EGFR) in cell lysates from adherent or suspension cells.</p>
 <p>View products ></p>	<p>Biocolor</p> <p>Biocolor Life Science supplies biochemical assay kits to measure to measure soluble and insoluble collagen, glycosaminoglycans, elastin, and glycosaminoglycans (to name a few) in cells tissues, fluids. Biocolor's product portfolio includes the dye-binding Sircol™ Collagen Assay for the detection of acid and pepsin-soluble collagens and the monitoring of collagen produced in situ or during in-vitro cell culture and in-vitro ECM formation. Sircol™ Collagen Assay kits are eligible for services, performed for you by the Project managers and Technicians at Teubio's own European based labs.</p>
 <p>View products ></p>	<p>Biogems</p> <p>BioGems was founded by scientists to support the global Life Science community with the essential products required to accelerate research. BioGems is a source of the highest standard for a wide range of Small Molecules, Flow Cytometry Antibodies, Media Supplements, Antibodies, as well as ECM's. Beyond the essentials for flow cytometry studies, BioGems provide reagents for Angiogenesis, Cancer, Apoptosis, Stem Cell, Innate Immunity, and Adaptive Immunity research.</p>
 <p>View products ></p>	<p>BioIVT</p> <p>BioIVT produces highly characterized reagents for <i>in vitro</i> human drug metabolism (formerly produced under the Cypex name). It covers human drug-metabolising enzymes, bactosomes CYPs (human, dog, mouse, monkey, rat,) and SULTs, purified CYPs, fine chemicals, and a range of research antibodies for ADME-Tox studies.</p>
 <p>View products ></p>	<p>BioLife Solutions</p> <p>BioLife Solutions manufactures proprietary protein-free, serum-free GMP biopreservation media, hypothermic storage media and cryopreservation media. As an example, CryoStor freeze Media products are designed to mitigate temperature-induced molecular cell stress responses during freezing and thawing.</p>

<p style="text-align: center;">BioP</p> <p>View products ></p>	<p>BioPRIM</p> <p>Bioprim is a resource for a complete range of serum, plasma and PBMCs for drug discovery and research purposes isolated from monkeys.</p>
 <p>biosensis <i>Make sense of your research!</i></p> <p>View products ></p>	<p>Biosensis</p> <p>Biosensis produce antibodies and reagents for Neuroscience, particularly on Neurotrophins and Neurotrophin Receptors. Biosensis's neuroscience portfolio also includes products for research in neurodegenerative diseases, neuro-development, and neuro-metabolism (incl. Alzheimer's, Parkinson's and ALS diseases), as well as autophagy, metabolic and stress disorders, and neuroimmunology and inflammation, and a unique collection of IHC and IF validated primary research antibodies.</p>
 <p>bioworld</p> <p>View products ></p>	<p>Bioworld Technology</p> <p>Bioworld Technology produces more than 15,000 highly purified Monoclonal and Polyclonal Antibodies and Kits for Life Science research in the field of Signal transduction & Phosphorylation studies, Cardiac markers, Neuroscience and Stem cell research. Bioworld Technology is one of the leading phospho-antibody manufacturers with over 500 phospho-antibodies for AKT, AMPK, GSK, STAT pathways. The peptides corresponding to each phospho-antibody are also available to facilitate your analysis.</p>
 <p>bit.bio</p> <p>View products ></p>	<p>bit.bio</p> <p>bit.bio's mission is to code cells to advance the wellbeing of humanity. To do so, they apply the principles of computation to biology. Their current focus is to develop a scalable technology platform capable of producing consistent batches of every human cell. This has the potential to unlock a new generation of medicine: it will enable research and drug discovery to move on from inappropriate models and work with the cells that actually are affected by human disease. A scalable platform of consistent cells will also be the basis for a new generation of cell and tissue therapies.</p>
 <p>BOSTER antibody and ELISA experts</p> <p>View products ></p>	<p>BosterBio</p> <p>Boster Biologicals (BosterBio) develop research primary and secondary antibodies optimized for WB, IHC, ELISA, as well as a variety of ELISA kits to detect biomarkers involved in cancer, developmental biology, neurosciences, inflammation. Their PICOKINE™ ELISA kits and PICOBAND™ antibodies reach picogram level sensitivity of your protein of interest.</p>
 <p>BPS Bioscience <i>Scientist Founded, Scientist Driven</i></p> <p>View products ></p>	<p>BPS Bioscience</p> <p>BPS Bioscience is leading producer of recombinant enzymes (wild-type and mutants), assay kits, substrates, and services for Drug Discovery. BPS Bioscience manufactures one of the largest selections of druggable targets (Acetyltransferases, HDACs, Histone Demethylases, Histone Methyltransferases, Kinases, Peptidases, Phosphatases, Phosphodiesterases, Poly ADP Ribose Polymerases, Ubiquitin Enzymes...).</p> <p>The product portfolio also includes assays to investigate immuno checkpoint protein interactions in relation to immunotherapy drug discovery programs e.g. PD-1/PD-L1/PD-L2; B7-1/CD28, B7-1/CTLA4; BLTA/HVEM, CD47/SIRPα; GITR/GITRL; CD47:SIRPα; CD137:CD137L; CD40:CD40L; TIGIT/CD226 as well as the Trp catabolism pathway (IDO and TDO)).</p>
 <p>BROADPHARM <i>A Worldwide Leading PEG Supplier</i></p> <p>View products ></p>	<p>BroadPharm</p> <p>BroadPharm is a leading provider for high purity PEG linkers and advanced bio-labeling reagents with a strong expertise in modern chemistry and notably innovative PEG linker synthesis and new PEGylation products.</p>

 View products >	<p>Canopy Biosciences</p> <p>Canopy Biosciences provides unique kits for gene editing & processing (eg CRISPR complete kits, KO cell lines and lysates) and bio-processing (eg host cell proteins (HCP) detection kits).</p>
 View products >	<p>Cedarlane</p> <p>Cedarlane Laboratories (Cedarlane Labs) manufacture research products for cell biology, neurobiology and immunology. It included research antibodies, complement for tissue typing, immunocolumns, and the Lympholyte® Cell Separation Media for the isolation of PBMCs and PMNs.</p>
 View products >	<p>Celartia</p> <p>Celartia is a biotechnology company manufacturing cell culture bioreactors. Celartia's system, Petaka, is an innovative and convenient labware device for cell culture, stem cell culture, tissue culture, cancer cell culture that enables the cells themselves to auto-regulate the levels of oxygen & CO2 in the media without using any external instrumentation or apparatus.</p>
 View products >	<p>Cell Applications</p> <p>Cell Applications produce a wide range of primary cell types (eg. Adipocytes, Astrocytes, Blood Cells, Cardiomyocytes, Endothelial Cells, Epithelial Cells, Fibroblasts, Keratinocytes, Melanocytes, Microvascular Cells, Smooth Muscle Cells, Synoviocytes...), optimised growth media, supporting cell culture reagents and antibodies to serve cell-based R&D.</p>
 View products >	<p>Cell4Pharma</p> <p>Cell4Pharma have developed 3 cell lines to empower researchers to accurately identify and eliminate the nephro-toxic compounds during preclinical research and increase your drug development success rate in clinical stages.</p>
 View products >	<p>Cellix</p> <p><i>We are Cellix</i> develop and manufacture an advanced microfluidics drug screening tool for cell-based assays that uses a simulated human environment thus narrowing the gap between in vitro and in vivo.</p> <p>Applications include investigation of cell adhesion, migration and transmigration under physiological flow conditions (mimicked in biochips) and cell culture with a simple iPod Touch controlled microfluidic pump. Therapeutic areas include thrombosis, atherosclerosis, inflammation, stem cell research, asthma, allergies, malaria and biofilm culture.</p>
 View products >	<p>CellResearchCorp</p> <p>CellResearch Corp. provides high quality primary cell strains, and culture media. Obtained from single donors and not pooled, cell strains are derived from multiple locations of the body. Besides the normal human skins, cell strains are derived from keloid and hypertrophic scars. For comparative research, fibroblasts isolated from normal skin adjacent to the keloid or hypertrophic scar are also available.</p>

 CELLSCRIPT™ <small>RNA for Translation in Cells</small> View products >	<p>CellScript</p> <p>CELLSCRIPT provides the best technologies for making and using RNA for translation in cells for clinical research and therapeutics (including kits for in vitro transcription, 5' RNA capping, poly(A)-tailed mRNA for translation in cells...).</p>
 View products >	<p>Celtarys</p> <p>Celtarys Research is a spin-off of the University of Santiago de Compostela specialized in designing and synthesizing fluorescent ligands with optimal pharmacological and photophysical properties to be used in early phases of drug discovery, from hit identification to lead optimization. They are experts in Chemical Biology, Medicinal Chemistry and Pharmacology, with +20 years' experience in research. Their proprietary technology was firstly applied to develop fluorescent GPCR ligands, which they have already validated in several HTS assays such as FRET, Fluorescence Polarization, High Content Screening, etc.</p>
 View products >	<p>Certest</p> <p>Certest Pharma is a technology-driven company specializing in RNA and oligonucleotide therapeutics, with a strong focus on delivery and thermostability. Certest excels in developing proprietary ionizable lipids, essential for lipid nanoparticle (LNP) production and RNA therapeutic delivery. Its extensive platform includes over 1,500 ionizable lipids, known for outstanding in vivo performance and LNP thermostability, allowing for tailored RNA delivery. By leveraging a proprietary peptide library for targeting and using advanced optimization software, Certest Pharma offers a complete solution for RNA therapeutic development, covering design, synthesis, and scale-up, ensuring customized targeted delivery and enhanced protein expression.</p>
 View products >	<p>CH3 Biosystems</p> <p>CH3 BioSystems is a manufacturer of high-performance ingredients for discovery of protein methylation pathways in cells and tissues.</p> <p>CH3 BioSystems provides Life Sciences researchers with superior, innovative epigenetics tools (Methylarginin specific antibody, peptides, enzymes, complementary molecular kits, cell lines, survivin promoter luciferase reporters...).</p>
 View products >	<p>CHI Scientific</p> <p>CHI Scientific Inc. is an innovative biotechnology research tool company committed to developing high-quality, cost-effective products and services aimed at fundamentally accelerating primary cell research and drug discovery.</p>
 View products >	<p>Cloud Clone Corp</p> <p>Cloud-Clone provide a large range of ELISA tests (Sandwich ELISA Kits, Double Sandwich ELISA Kits, Competitive inhibition ELISA Kits and Instant ELISA tests for increased efficiency and fast results).</p>
 	<p>Cureline</p> <p>Cureline, Inc. is a globally recognized biobanking company with a track record of successfully completing over 5,000 projects, including HBS validation, drug R&D, biomarker, and CDx development studies. Their clinical expertise includes Oncology, Hematology, AID/inflammation, infectious diseases, metabolic and cardiovascular conditions, maternal health, and rare human conditions among other Therapeutic Areas. Their partner network comprises over 150 clinical and research centers, laboratories, and hospitals worldwide. Their extensive experience in healthcare management, clinical trials, research, and international business allows them to provide precision medicine services in molecular and companion diagnostics development, biomarker R&D, medical device evaluation, and translational research.</p>

 View products >	<p>Curi Bio</p> <p>Curi Bio (formerly NanoSurface Biomedical). develop nanopattern substrates, printed at the bottom of sterile cell culture dishes, which provide a topographical and mechanical niche for cells to grow as if they are in vivo. By mimicking the extracellular environment, this unique Anisotropically NanoFabricated Substratum (ANFS) technology promotes the in vivo-like maturation and alignment of in vitro cell cultures. Curi Bio's nanopatterned cultureware has been already validated on various cell types such as cardiomyocytes, muscle cells, endothelial cells, iPS cells, mesenchymal stem cells, fibroblasts (to name a few) in in vitro cell cultures.</p>
 View products >	<p>Cytion</p> <p>Cytion (a CLS - Cell Lines Services brand) is an independent and privately owned cell bank that now includes over 800 cell lines from a variety tumours, tissues, and species, making it one of the largest and most important independent cell banks in the world. In addition to providing authenticated cell cultures, Cytion excels in the production of cell products such as DNA, RNA and cell pellets, and provides industry-leading services such as large-scale cell culture production, mycoplasma and virus testing for research institutions and industry partners, thus helping the scientific community make breakthrough discoveries and develop new therapeutic approaches to improve the lives of people around the world.</p>
 View products >	<p>Cytoskeleton</p> <p>Cytoskeleton, Inc. offers a wide range of innovative kits for drug screening, signal transduction and cytoskeletal research. These ready-to-use products, available in Europe through Teubio, are compatible with basic research or small screens and with a high throughput scale for large screens as well.</p>

 View products >	<p>DIVERSA Technologies</p> <p>DIVERSA Technologies is an early-stage biotech and drug delivery company founded in 2022 in Santiago de Compostela as a spin-off of the Health Research Institute of Santiago (IDIS) and the Galician Health Service (SERGAS). DIVERSA have patented a novel nanotechnology based on non-toxic, biodegradable lipids. DIVTECH nanosystems can bind small drugs and complex macromolecules with high efficiency while boosting their therapeutic activity. Binding molecules in membrane-like lipids increases their stability and helps target the right cells in the body, enabling more targeted and effective drug delivery.</p>
 View products >	<p>Dojindo Laboratories</p> <p>Dojindo Laboratories, founded in 1946 in Japan, is dedicated to producing high-quality reagents to advance scientific research. Our mission is to develop innovative tools that drive progress in life science research. We specialize in developing reagents for cellular function analysis. These reagents are utilized worldwide and are particularly prevalent in neurodegenerative disease, cancer, and aging research.</p>

E

 View products >	<p>Echelon Biosciences</p> <p>Echelon Biosciences provide products for studying cell signaling pathways, notably phosphoinositide phosphates for fundamental research and the development of potential drugs for cancer, diabetes, inflammation, infections, and cardiovascular disease.</p>
---	---

 Elabscience® View products >	<p>Elabscience</p> <p>Elabscience are specialized in immunoassays and reagents for the life science community. They have both a R&D platform and manufacturing plant, with in-house QC for every product, to ensure consistent and robust experimental results. Elabscience's major products cover Proteins, Antibodies, ELISA Kits and CLIA Kits, already cited in numerous publications. Small vialling formats are available for easy antibody testing in applications not tested in-house.</p>
 ElementZero Biolabs View products >	<p>Element Zero</p> <p>ElementZero Biolabs have developed a novel technology of beads allowing efficient capture and enrichment of your DNA/RNA in a sequence specific manner: the MagIC Beads. Particularly efficient for epigenetics studies, interactome analysis, and targeted sequencing, the MagIC beads allow you to work only on the DNA or RNA you are looking for. ElementZero have already developed a full list of viral RNA targets (SARS-CoV-2, HIV..) or transcripts, but this technology can be used with any of your custom targets</p>
 EnoGene View products >	<p>EnoGene Biotech</p> <p>EnoGene Biotech develops monoclonal and polyclonal research antibodies. tebu-bio has selected EnoGene Biotech for their unique collection of IHC validated primary antibodies that bring Life Scientists easy convenient and affordable tools to study cell signaling pathways.</p>
 EpiCypher. View products >	<p>EpiCypher</p> <p>EpiCypher offers innovative tools for Epigenetics and chromatin biology research including: Histone peptide arrays for quantitative, rapid and high-throughput analysis of effector protein, antibody or enzyme interactions with a comprehensive library of histone peptides; Highly purified histone-derived peptides; Recombinant nucleosomes and histone octamers; Epigenetic enzymes, assay kits, readers, and substrates...</p>
 EPIGENDX View products >	<p>EpigenDx</p> <p>EpigenDx is a genomic and epigenomic research company. EpigenDx offer methylated genomic DNA controls, validated Bisulfite Sequencing Primers for methylation analysis together with lab services for targeted NGS Methylation and microarray analysis.</p>
 Eurogentec View products >	<p>Eurogentec</p> <p>Eurogentec is a world-wide renowned manufacturer of products and services for Life Science Research, collaborating with Teubio for distribution throughout Europe of Eurogentec's research antibodies, cloning tools, PCR enzymes and MasterMixes.</p>
 exbio View products >	<p>Exbio</p> <p>EXBIO is a leading manufacturer of monoclonal antibodies and reagents for research and clinical applications with the focus on multi-color flow cytometry analysis of human cellular markers. Their comprehensive portfolio covers a diverse set of areas including Hematology, Immunology, Cancer, Stem cells, and Cell Biology. With experienced cytometry experts and biotech engineers, EXBIO offers long-term validated antibody markers in a broad selection of fluorochrome conjugates.</p>

 <p>FineTest®</p> <p>View products ></p>	<p>Fine Test Biotech</p> <p>Fine Test Biotech is an ISO9001:2008 Certified Company, offering a full line of quality research kits, which include ELISA Kits, related ELISA assistant reagents and more high quality antibodies, recombinant proteins.</p>
 <p>FOCUS BIOMOLECULES</p> <p>View products ></p>	<p>Focus Biomolecules</p> <p>Focus Biomolecules is a small molecule-based life sciences company providing with highly characterized bioactive inhibitors, activators, agonists, antagonists and Custom organic/chemical compound library synthesis</p>
 <p>FUJIFILM FUJIFILM Wako Chemicals Europe GmbH</p> <p>View products ></p>	<p>FUJIFILM Wako Chemicals Europe GmbH</p> <p>FUJIFILM Wako Chemicals Europe GmbH is a wholly owned subsidiary of FUJIFILM Wako Pure Chemical Corporation, a world-renowned supplier of high purity chemicals and reagents based in Japan. The German subsidiary was established in 1974 in order to expand Wako's business activities in Europe, Middle East and Africa.</p>
 <p>FULL MOON BioSystems</p> <p>View products ></p>	<p>Full Moon</p> <p>Full Moon BioSystems provide innovative products for proteomic research with an attractive offer of research antibody arrays to monitor hundreds of proteins (biomarkers) in a single experiment. Full Moon BioSystems immunoassay kits can also be implemented as a service for you by Teubio at our own laboratories in Europe</p>
 <p>funakoshi FRONTIERS IN LIFE SCIENCE</p> <p>View products ></p>	<p>Funakoshi</p> <p>Funakoshi Co Ltd provide innovative and convenient research reagents for cell biology, biochemistry and molecular biology in various life sciences fields.</p>

 <p>GEG Tech Genetic Engineering Technologies</p> <p>View products ></p>	<p>Geg Tech</p> <p>GEG Tech manufacture exceptionally reliable and high-titer lentiviral vectors. Their newly developed non-integrative lentivirus technology (deficient for the integrase) offers unique nucleic acid delivery solutions with very low genotoxicity. For drug delivery purposes, GEG Tech also offer lentiviral vectors deficient for the reverse transcriptase ensuring no genotoxicity and excellent expression even into hard-to-transfect cells.</p>
---	--

 GeneCopoeia™ <i>Expressway to Discovery</i> View products >	<p>GeneCopoeia</p> <p>GeneCopoeia is the original manufacturer, seller, and service provider of a variety of biological reagents, including genomics, proteomics, molecular and cellular biology. Their product portfolio includes clone collections for ORF cDNA, shRNA, miRNAs, promoters, CRISPR, TRE and more.</p> <p>GeneCopoeia also provides Genome editing products and services, such as sgRNAs and libraries, indel detection, donor vectors, Cas9 cell lines, Safe harbor kits and TALEN.</p> <p>GeneCopoeia has various viral delivery systems, such as Lentiviral and AAV systems, as well as, MicroRNA solutions that include precursor and inhibitor clones, 3' UTR clones, qPCR primers & arrays and qPCR kits.</p> <p>Additionally, they have a collection of PCR/qPCR primers, qPCR & RT-qPCR kits and arrays. Lastly, their extensive suite of kits and reagents include Luciferase reporter assays, transfection reagents, cloning systems, FISH probes and more.</p>
 GenoMembrane View products >	<p>Genomembrane</p> <p>Tebubio has selected GenoMembrane to provide transporter-related products and services for the development and design of novel drugs.</p> <p>One of the major reasons for drop-out is inappropriate ADME (Absorption, Distribution, Metabolism, and Excretion) properties of candidates, resulting in low bioavailability or toxicity. It is, therefore, important to predict such problems at as early a stage as possible in the development process. GenoMembrane provides high-quality transporter reagents for this purpose. A few examples:</p> <ul style="list-style-type: none"> • ABC Transporter Membranes / Vesicles • Ready-to-use assays kits for ATPase assay using ABC Transporter/Membranes • SLC Transporters...
 GenScript <small>Make Research Easy</small> View products >	<p>GenScript</p> <p>GenScript is a global biotechnology company focusing exclusively on early drug discovery and development services. GenScript also provides an extensive product portfolio ranging from validated antibodies, stable cell lines, surface marker-based cell separation, encoded-chemical libraries, to PCR, gene cloning, and gene editing reagents and kits. Furthermore, offerings include automation solutions for western blotting, protein purification (AmMag™ purification technology), and marker-assisted cell separation (CytoSinct™ cell separation technology)</p>
 BIOTECHNIK GERBU View products >	<p>Gerbu Biotechnik</p> <p>GERBU Biotechnik GmbH offer a wide range of biochemicals, reagents, nutrient media and ingredients.</p>

 View products >	<p>Innovative Biochips</p> <p>Innovative BioChips (a.k.a. iBioChips) is a biotech company that integrates cellular assays and engineering into miniaturized chips to reach cutting-edge sensitivity and high-throughput.</p> <p>The highly popular 1CellAssay Single-Cell Isolation Kit is a convenient, rapid, selective, and damage-free biochip for single cell isolation to be used for</p> <ul style="list-style-type: none"> • Single cell isolation • Single cell lysis • Single cell multiomics • Single cell PCR & Sequencing • CRISPR cell line development • Pluripotent cell isolation <p>Another innovative product is the 1 Million Microwell Device (1MMD), a low-cost and highthroughput biochip ideal for single-cell capture and RNA-sequencing.</p>
 View products >	<p>Innovative Research</p> <p>Teubio has selected Innovative Research as a source of human and animal biological products for <i>in vitro</i> studies. Established in 1998 following the realization that dependable, high-quality, and affordable research material was difficult to come by, Innovative Research now offer over 1,000 human and animal biological products, including plasma, serum, biological fluid, whole Blood, disease state plasma and serum IgG and plasma proteins...</p>
 View products >	<p>Impact Biologicals</p> <p>Impact Biologicals manufactures recombinant proteins for biomedical research. Several of their proteins are offered as catalog items that are widely used in neurology/neuropathology studies related to protein aggregation. These include full-length mouse and bank vole prion proteins and human alpha-synuclein (including the K23Q variant). Variants of these proteins (other species, other mutations) are made upon request. Impact Biologicals also designs, expresses, and purifies a range of other proteins as custom projects.</p>
 View products >	<p>iQ Biosciences</p> <p>iQ Biosciences offer Primary cells, such as peripheral blood mononuclear cells (PBMCs), splenocytes, and bone marrow cells from non-human source tissues from well-respected institutions and isolate the relevant cell types through careful processing.</p> <p>Access high quality samples from a diverse group of animal species that are pertinent for many different applications in drug development or academic research.</p>
 View products >	<p>iXCells Biotechnologies</p> <p>Headquartered in San Diego, CA, iXCells Biotechnologies is a leading cell technology company specializing in preclinical drug discovery solutions with focus on disease relevant cellular models enabling technologies and services to the academic, biotech and pharma communities. iXCells provides high quality primary cells normal and diseased iPS cell lines, iPSC-derived cell products, custom iPSC services, functional bioassay development and execution, among other products and services.</p>

 View products >	<p>Montana Molecular</p> <p>Montana Molecular develops genetically encoded fluorescent biosensors and probes for cell-based assays and live cell imaging to conveniently assess intracellular parameters (ex. cAMP, DAG, PIP2, Ca2+, and voltage...).</p> <p>Montana Molecular technology is based on BacMam vectors used as an efficient vehicle to optimally deliver and express genes in mammalian cells for Robust Assays in Living Cells:</p> <ul style="list-style-type: none"> • Easy assay steps – No cell lysis • Fluorescence imaging or plate reader detection ($Z' > 0.8$) • Physiologically-relevant and cell friendly • No forskolin or IBMX needed • No enzymes or co-factors • Multiplex GPCR Assays: Gs, Gq, Gi, Voltage
 View products >	<p>Multus</p> <p>Multus makes serum-free ingredients and formulations for cell culture media. Their goal is to provide media that is cheaper, more consistent and more convenient to purchase, while reducing the reliance on animal-sourced components. This means R&D teams can save money, reduce batch testing, improve reproducibility and avoid the other problems associated with FBS. This is done by developing new ingredients and optimising formulations for cell types that researchers work with. Their growing product range includes attachment factors, growth factors and serum-free growth supplements.</p>

---	---

 View products >	<p>Nanotein Technologies Inc</p> <p>Nanotein Technologies Inc is a California-based biotech start-up company that makes next-generation Cell Therapy reagents for the activation and expansion of T cells and NK cells. Our NanoSpark platform technology is a fully soluble, protein scaffold with specific, functional antibodies or cytokines, bound to the scaffold with a high-affinity linkage. We use this platform to create protein-antibody complex products with a highly effective, optimal geometry to take advantage of receptor clustering biology, and stimulate the expansion of immune cells with multipotent qualities during ex vivo activation. STEM-T is our flagship, T cell activation reagent, that generates predominately self-renewing stem cell memory T cells during expansion. For companies desiring high CD4+ T cells, EVEN-T can be used to preferentially select for CD4+ T cell expansion. GROW-NK is our first-in-class, feeder-free, NK cell activation reagent, allowing for rapid expansion of NK cells, producing robust cytotoxic activity.</p>
 View products >	<p>Netri</p> <p>NETRI is an industrial start-up that designs organs-on-chip for healthcare and wellness industries, supporting their customers throughout the development of their drug or product candidates, providing predictive answers on toxicity, efficacy, and modes of action in the discovery, preclinical or clinical phases. Organs-on-chip devices enable creation of healthy or pathological physiological models. Using its high-throughput microfluidic technologies, NETRI's models recreate human physiology in vitro by co-culturing cells, either primary or derived from human stem cells, compartmentalized and coupled with functional activity measurements. NETRI commercializes its NeuroFluidics™ organs-on-chip models in pain, cosmetic and nutritional health applications.</p>
