

Want to get to know plants a little better? Check out these amazing plant facts and share them with your friends and family

## WORLD RECORD HOLDERS

As we're learning all about how to help plants grow big and strong, here are some of the biggest plants in the world!

**Stinking Corpse Lily**  
This plant produces the world's biggest flower, but it smells really bad

**Corpse Flower**  
Another smelly one! This flower can be up to 3 metres and uses smell to attract insects

**Splendid Pitcher Plant**  
Instead of flies, these massive carnivorous plants eat lizards and rats!

**Cardon Cactus**  
Mostly found in Mexico, these cacti can live 300 years and grow up to 19 metres

**Giant Sequoia Tree**  
These huge trees can grow 85 metres high and 8 metres wide

**Neptune grass**  
An 8km colony of this grass was found near Ibiza and is thought to be 3,000 years old!

### DID YOU KNOW?

You can stop seedlings getting fungus or disease by adding a pinch of cinnamon to the soil

## FABULOUS FERTILISER

What makes fertiliser so great? Take a look at how Boost helps you get the most out of your plants

Plant food (fertiliser) helps plants to grow much better than just water. But where does the plant food go?

Plants use it to grow

Rain washes the plant food into the soil so plants can take it up through their roots

### DID YOU KNOW?

It's better to under-water plants than give them too much

The nutrients from the plant food make our veggies healthy and nutritious

Most plant food is used every week when the plants are growing, but a little bit of Boost is used every time we water our plants so that they have food all the time
