

Vaccination ≠ Immunization Vaccine poor immunogenicity Maternally Derived Antibodies (MDA) Genetic non-responders 1:1,000 CPV 1:5,000 CDV 1:100,000 CAV

Checking the

antibody titer with

VACCICheck®

assessment

Prebreeding immunity

- · It may be necessary to use another booster
- · A genetic "nonresponder" can be identified in this way

illness

VACCICheck*

In advance of medical procedures Titer testing should be performed annually as a precautionary measure for geriatric dogs – aged 10 year and above (WASAVA)
